MOVIE TICKETING SYSTEM PROJECT

[HIGH LEVEL REQUIREMENT DOCUMENT]

Rev 1

TEAM MEMBERS:

1) HENG CHIANG YONG	2) JONY LIU	3) KOH KIM KANG
4) ONG KAH SONG (ANDY)	5) PHANG KANG CHENG	6) PRISCILLA LOW YI XIAN
7) TAN HAN WEN KENNETH	8) TAN HWEE SONG ANDREW	9) WOOI YEONG CHENG
10) ANG WEIXUAN DESMOND	11) CHEONG SI SIEN	12) TIAN KAIWEN

Project Estimated Period/ Duration

Project Period   :   **(start date) to (handover date)**
Duration   :   **3 months**

The Goal

"To create a Cinema Booking System to serve the Client's Customers with a seamless service experience. At the same time to better manage the Client's Customer data, to increase operational efficiency and provide cost savings to the Client."

To Build (What?)

"To build a Cinema Booking System which gives the Client's Customers a seamless experience throughout their entire transaction journey.

The said system is also to possess a working database which will store Client's Customers data for future marketing purposes, as well as other promotional activities to be carried out at the Client's discretion.

Together, the system, database and separate complementary e-payment tools will help to better manage the Client's Customer bookings, experience and reduce running costs."

If purchasing is to be done online

1. *Database*
2. *Website*
3. *E-ticket system*
4. *E-payment system*

If purchasing is to be done offline

1. *Database*
2. *User Interface for Inputs and Outputs*
3. *Ticket Printing System (Physical Ticket Issuance)*
4. *POS System*

Benefits (Why?)

1. *Increased efficiency to reduce manpower requirements*
2. *Greater reach to customers by providing an online avenue for bookings*
3. *Consolidated data for marketing purposes - use of database*
4. *Real time analysis of movies for popularity, rating, etc - use of database data*
5. *Better user experience by reducing queue times*

Proposed Tools to be used

1. *Software Development Tools*
   a. *Oracle SQL Developer IDE*
   b. *Apache Netbean IDE*
2. *Hardware Development Tools*
   a. *Laptop/PC*

Software Requirements for the Project

1. *Frontend: HTML/CSS/Javascript*
   a. *Visual Studio*
   b. *Visual Studio Code*
   c. *Atom*

2. *Backend: Java/Oracle DB*
   a. *Oracle SQL Developer IDE*
   b. *Apache Netbean IDE*
   c. *IntelliJ*
   d. *Eclipse*
   e. *Python*

Hardware Requirements for the Project

1. *Desktops*
2. *Laptops*
3. *Tablets*
4. *Mobile phones on Windows/Android/Apple*

System(s) the Project expected to Operate on

1. *Windows*
2. *macOS*
3. *Linux/Unix??*
4. *Android*
5. *iOS*
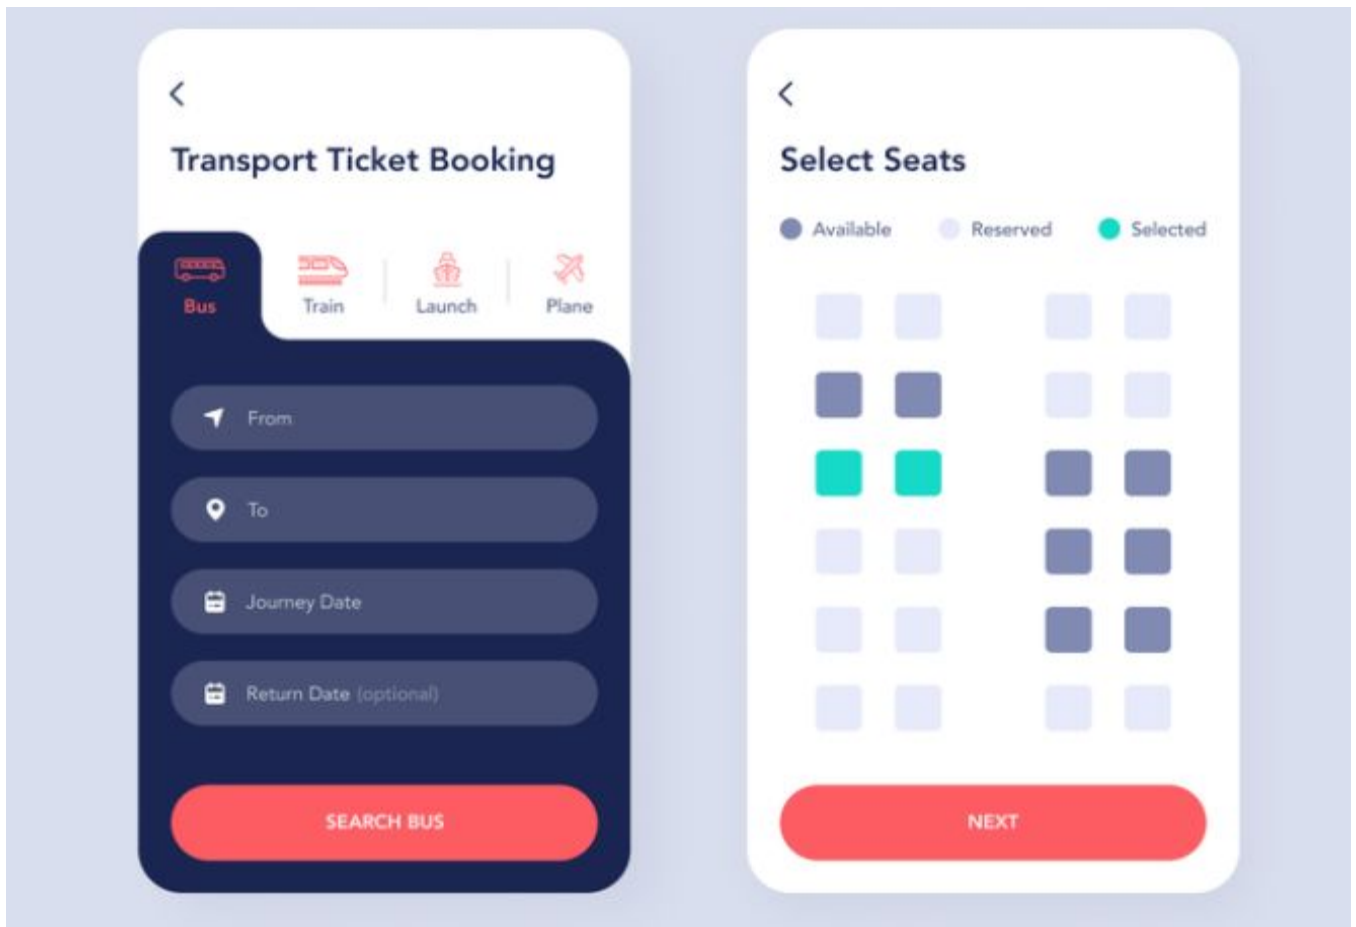

Coding and Naming Conventions

1. *PascalCase - Chosen option*
2. *camelCase*
3. *Snake_case*
4. *kebab-case*

Customer

Data	Datatype	Constraint	Nullable
Customer_ID	INT	Primary Key	Not Null
Cust_Name	VARCHAR2(40)		Not Null
Email	VARCHAR2(40)		
Contact	VARCHAR2(12)		

Discussion Section

Booking
Ticket Number **(INT, PK)**
Qty of ticket/s: (INT)
Movie ID *(INT, FK)*
Movie Title (String, Not Null)
Seat number *(String, FK)*
Dates (DATE, Not Null)
Time (TIME, Not Null)
Concession Rate: Senior (>60-y old) -> too much scope???
Payment Mode (String, not null)
Total Price: (INT)
Customer ID *(INT, FK)*
Customer Name (String, not null)
Food Beverages (String)   *i.e. Popcorn, Hot Dog, Chips, Hot Drinks, Cold Drinks*

Cancellation History(this is a procedure? Not database Agree....:) ok -> I think it can also be in database? Like when u do cancellation in other apps, they will be able to track u afterwards or u can see in history like cancellation history?

Ticket Number INT
Cancellation Number
Cancellation Date Date

Screening Schedule
Movie ID **(INT, PK)**
Movie Title (String, Not Null)
Screening DateTime (Date/TimeStamp, Not Null)
Theater Number (INT, Not Null)

Transactions
Transaction ID **(INT, PK)**
Payment Amount (DOUBLE, not null)
Customer ID *(INT, FK)*
Transaction DateTime (LOCALDATETIME, not null)
Payment Mode (String, not null)   *i.e. Cash/Credit/Paylah/Voucher*

Customer
Customer ID **(INT, PK)**

Customer Name(String, not null)
Customer Email (String)
Customer Contact Number (String)

Seats Management
Seat number **(String, PK)**
Ticket Number *(INT, FK)*
Seat Type (Boolean, 0 for Couple, 1 for Single)

Rewards/Loyalty *(Can skip this for now? .. this module will let to rewards point system redemption modules ⇒ different type of rewards etc aka side show..) I agree we should skip this for now yes please*
Customer ID
Reward points?

Admin/Staff Module
Create User/Staff
Mgr ID
Report generation

Chat History

Branch ID/Hall
In this case, shld the table include seat number and a table on seat to refer to cinema id and hall number?

I think we miss out the seat number… I agreed with you.
Yes seat and row number seem to be missing
One cinema id shld have a few threatre numbers? anybody knows what cinema ID is for? branches?
Cinema ID is Branch of the Cinema ok, makes sense then
I presume it is for one cine complex, and threatre refering to individual hall…
Wondering how to put in the seat number? Seat number considered unique across different cine and halls? -> we are working on just on 1 cinema company, so the numbering would be the same.
Hmm for seat no. can we put varchar? Like 13A etc...then it can vary across cinemas and halls.,=> Yes okay agree second this

Is Booking date the movie date and time? Or when the ticket is booked? Should transaction id be inside ticket ID? I think this for refund or cancellation
